## Introduction to G-code: The Language of Automated Machining

G-code is a programming language that communicates instructions to CNC machines, dictating movements, speeds, tool changes, and other operational parameters. It is a standardized language, but with variations depending on machine manufacturers and controllers. Its primary purpose is to translate design specifications into machine-readable commands that ensure precise fabrication of parts and components.

G-code's prominence stems from its simplicity and adaptability. Its syntax consists of commands (called codes or words), each starting with a letter (usually G or M), followed by a number and parameters. For example, "G01 X10 Y20" instructs the machine to perform a linear move to the coordinates (10,20).

### Key Features of G-code:

- **Universality:** While variations exist, G-code serves as a common language across numerous CNC platforms.
- **Flexibility:** Capable of controlling complex machining operations, including milling, turning, drilling, and laser cutting.
- **Automation:** Enables unattended operation, reducing manual intervention and increasing productivity.
